this edited book covers ongoing research in both theory and practical applications of using deep learning for social media data social networking platforms are overwhelmed by different contents and their huge amounts of data have enormous potential to influence business politics security planning and other social aspects recently deep learning techniques have had many successful applications in the ai field the research presented in this book emerges from the conviction that there is still much progress to

be made toward exploiting deep learning in the context of social media data analytics it includes fifteen chapters organized into four sections that report on original research in network structure analysis social media text analysis user behaviour analysis and social media security analysis this work could serve as a good reference for researchers as well as a compilation of innovative ideas and solutions for practitioners interested in applying deep learning techniques to social media data analytics

the aim of this research topic for frontiers in psychology under the section of cognitive science and frontiers in neurorobotics is to present state of the art research whether theoretical empirical or computational investigations on open ended development driven by intrinsic motivations the topic will address questions such as how do motivations drive learning how are complex skills built up from a foundation of simpler competencies what are the neural and computational bases for intrinsically motivated learning what is the contribution of intrinsic motivations to wider cognition autonomous development and lifelong open ended learning are hallmarks of intelligence higher mammals and especially humans engage in activities that do not appear to directly serve the goals of survival reproduction or material advantage rather a large part of their activity is intrinsically motivated behavior driven by curiosity play interest in novel stimuli and surprising events autonomous goal setting and the pleasure of acquiring new competencies this allows the cumulative acquisition of knowledge and skills that can later be used to accomplish fitness enhancing goals intrinsic motivations continue during adulthood and in humans artistic creativity scientific discovery and subjective well being owe much to them the study of intrinsically motivated behavior has a long history in psychological and ethological research which is now being reinvigorated by perspectives from neuroscience artificial intelligence and computer science for example recent neuroscientific research is discovering how neuromodulators like dopamine and noradrenaline relate not only to extrinsic rewards but also to novel and surprising events how brain areas such as the superior colliculus and the hippocampus are involved in the perception and processing of events novel stimuli and novel associations of stimuli and how violations of predictions and expectations influence learning and motivation computational approaches are characterizing the space of possible reinforcement learning algorithms and their augmentation by intrinsic reinforcements of different kinds research in robotics and machine learning is yielding systems with increasing autonomy and capacity for self improvement artificial systems with motivations that are similar to those of real organisms and support prolonged autonomous learning computational research on intrinsic motivation is being complemented by and closely interacting with research that aims to build hierarchical architectures capable of acquiring storing and exploiting the knowledge and skills acquired through intrinsically motivated learning now is an important moment in the study of intrinsically motivated open ended development requiring contributions and integration across a large number of fields within the cognitive sciences this research topic aims to contribute to this effort by welcoming papers carried out with ethological psychological neuroscientific and computational approaches as well as research that

since 1981 there has been an attempt in europe to organize a series of small meetings workshops tavole rotonde with the aim of bringing together physi cists and chemists interested in problems concerning atoms or molecules in teracting with external photons where the continua are investigated the number of problems that fall into this category turns out to be vast however it is not possible to make a strict separation into problems con cerning atomic and molecular collisions and those related to the usual spec troscopy this admixture of two disciplines discussions on the role of photons and on the interaction of external electromagnetic fields with the continuum provided a central motivation for these workshops the fourth of this series of meetings was held at cortona between june 16 and 20 1986 it was attended by about 100 researchers in the field and there were 43 presentations all having equal time these talks form the subject

matter of this volume the idea of publishing the proceedings of these meetings is not new it allows one to have small meetings in which the subject matter can be discussed at length in a lively atmosphere however after the meeting is over the speakers can collect their thoughts and produce articles in which the results of their interaction with the other participants can be incorporated
